The real-time solution for
recording and archiving
process data!

GlobalSight

control & monitoring systems for regulated industries

GlobalSight is your online and real-time solution for recording and archiving process data, as well as automating, controlling, & monitoring highly-regulated, sensitive processes.

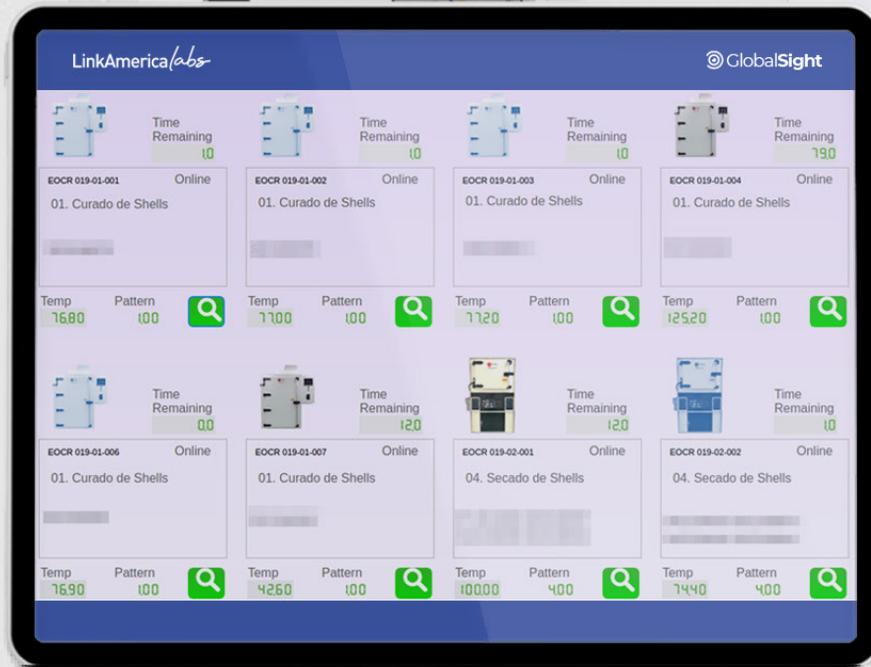

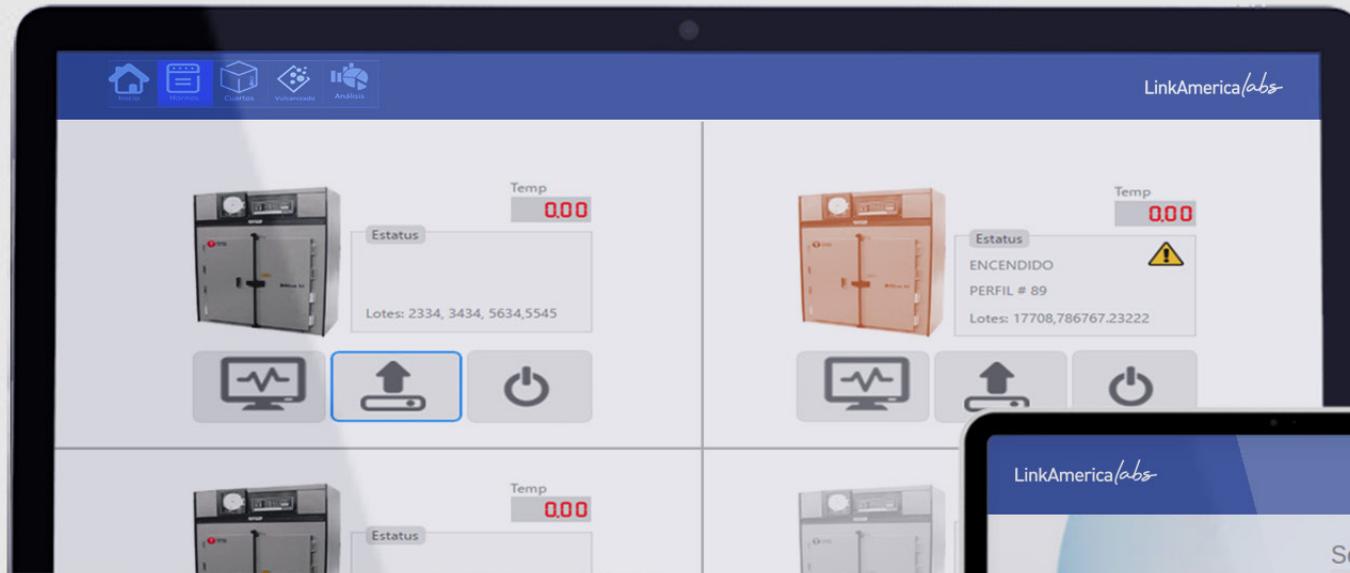

easily adaptable!

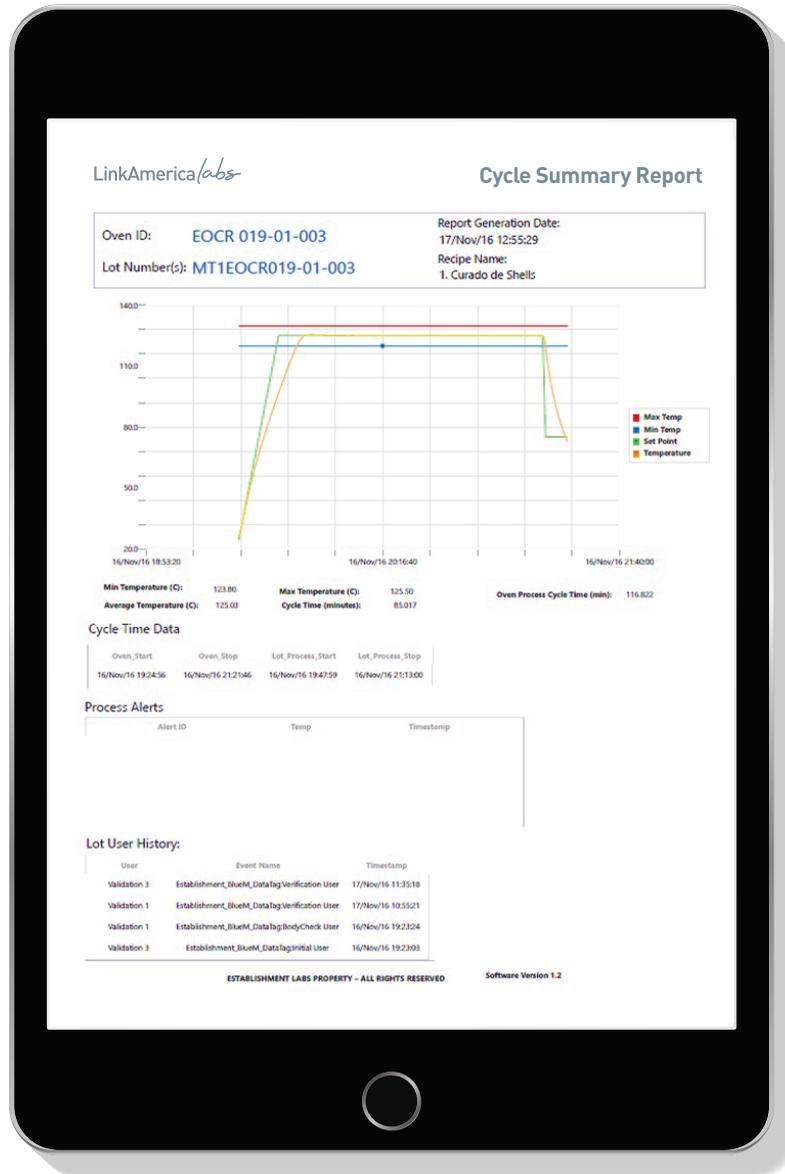

GlobalSight easily connects with many types of industrial, medical, and pharmaceutical industrial equipment. It gathers data to enable full web-based control where several or a large number of industrial equipment may be in use.

full traceability & recording for process equipment!

Our solution is especially suitable for sectors where strict requirements for traceability and process control apply in accordance with regulatory authority norms: medical, pharmaceutical and electronics manufacturing

solution capabilities

- Fully customizable reports and security levels to comply with your regulator's authority requirements.
- Setting of predefined telemetry profiles in accordance with your product specifications.
- Data is secured, stored and available for audit, validation or analysis processes.
- Ability to monitor your equipment in real time with a modern fully visual and mobile friendly interface.
- Automatically link your production and administrative software systems directly to Labs' platform for an end to end fully integrated experience.
- Full control of your equipment, as well as wired/wireless access to GlobalSight IoT Platform

get full control of your ovens, as well as wired-wireless access to our IoT platform!

This is a state-of-the-art, web-based solution that enables remote control and monitoring, as well as full traceability and recording, for manufacturing process equipment in a wide range of manufacturing applications

value business added

- Full web-based control where several or a large number of ovens may be in use.
- Information is uploaded to either Labs' cloud, or on-premises, servers.
- Zero automation down payments. All devices, gateways and onsite installation included on contract.
- Ability to connect from anywhere anytime, from any type of device.
- Recovery of last production values and securely stored reports
- Optional extra sensor inputs for monitoring additional production activities and variables.
- Increase in overall company productivity. There's no minimum quantities required.
